## Customer service

The Lindner Technology Group, Inc. is committed to providing high-quality products and customer service. Regular customer contact ensures that your staff has consistent support and updates.

## The technical staff

MailOut™ is installed in your district, on your server. It's browser-based so you just need a standard Internet browser to use it. MailOut™ is built on industry-standard products, including Microsoft® Windows operating system, IIS, and SQL Server database. We work with you and your IT staff to integrate it into your existing website & network, so the installation is fast and easy.

The Lindner Technology Group, Inc. specializes in K-12 web-based products that are installed on your server and require no ongoing fees. Whether you need to improve Human Resource functions, enhance staff and parent communication, or increase productivity, our products meet the needs of districts of all sizes.

## Other great K-12 administrative products:

- Applicant Central™ — employment application system
- Calendar K-12 — shared district calendar system
- Contact Central™ — digital staff directory
- Start to Finish™ — seamless new employee integration
- UpGrade™ — elementary report card

Each product is fully customized to integrate perfectly with your existing web site, providing fluid and seamless presentation and navigation.

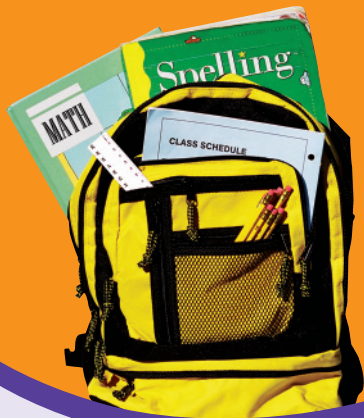

innovate + communicate

**MAILOUT™**  
Get your message to  
parents instantly

Important papers don't belong in the bottom of a backpack!  
MailOut™ keeps parents informed and involved.

**Parents often find out a little too late that there's an important message for them in the bottom of their child's backpack.**

Use MailOut™ to send custom e-mails and attachments directly to parents and community members. This web-based product is installed on your server and expands your districts communication capability. With MailOut™, parents are better prepared for upcoming field trips, school events, and closures; and the community receives current information on bond updates, agendas for school board meetings, the latest team score, and more.

**Communication—when they need it, and how they want it!**

Parents and community members opt-in to receive information about the district, schools, classes, and other important information. Users of MailOut™ control their own account and can submit several e-mail addresses, providing them flexibility for how and where they receive your message.

**Technology**

MailOut™ is integrated into your existing web site and requires little or no IT staff time. Because MailOut™ is a self-service application, account information is maintained by parents and community members (i.e. current e-mail address), providing your district with a much more reliable list and less returned e-mail.

**Integrate easily into your district**

MailOut™ is effective and simple for administrators to use. The capability of providing information to parents and the community is distributed throughout the district. You determine who has access—teachers, principal, superintendent, or administrative staff. Additional features such as templates, spell check and rich-text editing allow your staff to send professional and polished e-mails, maintaining a positive image for your district.

MailOut™ is installed on your server and requires **no** ongoing fees.

**Save time and money...**

...and no more paper cuts! MailOut™ lowers administration costs—you'll reduce the manual paper process, the expenses for paper and postage, and the number of incoming phone calls, MailOut™ also increases parent participation, community involvement and even boosts event attendance.
